

Kolloquium „Statistische Methoden in der empirischen Forschung“

Wann: 09. Januar 2024, 17:00 – 18:30 Uhr

Wo: [Campus Charité Mitte | Hörsaal der Nervenlinik | Bonhoefferweg 3, 10117 Berlin](#)

Online-Übertragung: der Link wird auf der [Website](#) zur Verfügung gestellt

Tobias Kurth (Charité)

Causal Frameworks in Observational Research: Necessity and Implications

In his presentation, Dr. Tobias Kurth explores the imperative of implementing causal frameworks in observational studies. Focusing on causal inference and prediction, Dr. Kurth will highlight methodological requirements and potential biases associated with studies lacking a causal framework. The presentation will also include an illustrative example from an animal experiment to emphasize the broad applicability of causal thinking. This talk aims to advocate for a causally-informed approach to enhance the rigor of several research domains.
