Lecture Series on Chronic Inflammatory Diseases -- Thursdays 2-3 pm, DRFZ, Seminar Room 3 --

Chronic Inflammatory Diseases are a major health issue without satisfactory treatment despite decades of research. In this lecture series, postdoctoral researchers associated with the Leibniz ScienceCampus Berlin, will present their research areas and perspectives spanning state-of-the-art experimental methods, cellular mechanisms of chronic inflammation, novel therapeutic approaches and drug discovery. The aim is to share experiences, ideas and concepts thereby increasing interest in the complex field of chronic inflammatory diseases among advanced Master's students and PhD students in all related subjects.

Date	Speaker	Topic
25.04.19	Gitta Heinz	Next Generation Sequencing to investigate Immunity and Chronic Inflammation
02.05.19	Marta Ferreira Gomes	The Importance of Fungal Infections – The <i>Candida albicans</i> Case
09.05.19	Randy Lindquist	Chronic Inflammation at Ectopic Sites
16.05.19	Frederik Heinrich	Analysis and Visualization of RNAseq Data
23.05.19	Annette Lahmann	Development and Maintenance of T Follicular Helper Cells
06.06.19	Johanna Callhoff	Claims Data for Health Services Research in Chronic Inflammatory Diseases
13.06.19	Caroline Helmstetter	Quality versus Quantity in T Cell Cytokine Production
20.06.19	Stefan Frischbutter	Mast Cells in Chronic Inflammation
27.06.19	Martin Schäfer	Obesity and Rheumatoid Arthritis – of Biology and Biologic Drugs
04.07.19	Laleh Khodadadi	CAR-T Cell Therapy
11.07.19	Yvette Meißner	Pregnancies in Patients with Spondyloarthritis
