

Kolloquium „Statistische Methoden in der empirischen Forschung“

Wann: 18. Januar 2022, 17:00 – 18:30 Uhr

Wo: Online

Effect size estimates from parametric vs non-parametric methods: why details matter. A case study for rare diseases

Ursula Garczareks

Principal at Strategic Consulting in Cytel

In this case study we present on the journey to find a good statistical procedure for a pivotal trial in some rare genetic eye disease. Good in this journey is not only determined by the operating characteristics of the related hypothesis test but also by the interpretability of the effect size estimate.
